

Internationalized Domain Names

Securing Internationalized Domain Names (IDNs)

[SSL certificates containing local languages in all certificate fields]

thawte now provides SSL certificates to customers who use Internationalized Domain Names - the first Certification Authority to offer this. Internationalized Domain Names (IDNs) provide a convenient mechanism for users to access websites in their preferred language.

thawte's systems are now able to recognize and issue certificates that contain local language characters in all certificate fields.

An example of the certificate content for a certificate for an IDN is shown below.

Certificate Information

This certificate is intended to:

- Proves your identity to a remote computer
- Ensures the identity of a remote computer

Issued to: www.生産.com

Issued by: Thawte SGC CA

Valid from 11/28/2004 **to** 11/28/2006

 You have a private key that corresponds to this certificate.

Not only will your secured Internationalized Domain content be reflected in the certificate details, but your *thawte* Trusted Site Seal will also reflect your local language content. *thawte* systems are also fully internationalized across all certificate enrollment details including Code Signing Certificate product lines.

Is this product right for my business?

If you are running a secure online business on an Internationalized Domain Name, or just wish customers to know that your Internationalized Domain Name has been verified by the Internet's most trusted company, then purchase any digital certificate from *thawte* (SGC SuperCert, SSL Web Server Certificate, SSL123 Certificate, or Code-Signing Certificate), and your Internationalized Domain Name will be reflected in the certificate details, thus assuring your customers peace of mind.
