

Thawte Certificate Center

Thawte Certificate Center

Thawte® Certificate Center enables organizations to purchase and manage their SSL and code signing certificates with ease. Ideal for organizations managing a handful of certificates, Certificate Center is free with the purchase of any Thawte digital certificate. At no additional cost, quickly migrate your organization's other Thawte digital certificates into your account, providing you with instant at-a-glance certificate management. Certificate Center is also built to support you as your organization grows, further saving time and cost of managing multiple digital certificates.

PROTECT DATA IN TRANSIT WITH A FULL RANGE OF DIGITAL CERTIFICATES

Thawte Certificate Center supports a wide range of digital certificates to meet your unique requirements:

- **Extended Validation SSL** – Build confidence in the authenticity of your site and enable higher conversions by displaying the green address bar
- **Subject Alternative Names for Unified Communications** – Reduce overhead by securing multiple domains within one SSL certificate
- **Server Gated Cryptography SSL** – Enable site visitors to experience the strongest encryption possible with their browser and version of choice
- **Organization Validated SSL** – Secure data-in-motion on publicly-facing sites and servers

Key Benefits

Rapid Deployment and Flexible Access through cloud-based console, accessible via the most common web browsers

Dashboard Views and Tabbed Navigation within optimized, intuitive user interface

Improved Efficiency and Fewer Administrative Headaches thanks to at-a-glance management of SSL and code signing certificates in a single interface

Reduced Risk of Untimely Expiration afforded through certificate status reports and notifications

Prompt, Efficient Attention to Issues available from 3 technical support and customer service centers worldwide, offering 24x5 support in over 30 languages

- **Domain Validated SSL** – Get SSL within 1 business day or faster; ideal for testing, staging and content-feed servers where authentication need is minimal
- **Code Signing** – Reduce security warnings and deliver your code and applications safely with “digital shrink wrap” for multiple code platforms
